

Professional sanitizer for cars, campers, buses and work environments.

With Programmable
Timer

100 m³
in only 20 minutes

**Effective
against VIRUSES
and BACTERIA.**

OZONE energy

OZONO3 is a professional machine suitable **for disinfection and sterilization of cars, campers, buses and work environments by means of ozone** produced by very high intensity electric discharges.

Ozone is a strong oxidizing agent and it is recommended for all professional sanitization processes due to its ability to kill and eliminate any type of bacteria and viruses present in the air or in water.

Ozone is an unstable colourless GAS formed by trivalent oxygen (O₃) which in nature is transformed into the atmosphere by the irradiation of ultraviolet solar rays, or by electrical discharges produced during thunderstorms.

It has a very high oxidizing power and **disintegrates without leaving chemical residues**. Its high oxidizing power and its natural tendency to return oxygen (O₂), makes it a GAS widely used in many applications for air and water treatment.

Its particular instability does not allow it to be stored, so it must be produced in the place where it is used, in the absence of people or animals.

High ozone production capacity (10g/h)

allows you to quickly sanitize small volumes (cars / campers) and effectively also larger volumes (buses / offices).

Digital timer

programmable from 1 to 90 minutes with 16 different types of programming (daily and weekly).

Therefore also suitable for the disinfection of large volumes by programming the work at night or by repeating the cycles.

Automatic Cooling System

of the highest quality and latest generation, which allows a reduction in energy consumption and low environmental impact.

Silent, efficient and easy to use.

SOMEONE YOU CAN TRUST

The advantages of ozone

In the Automotive field, OZONE3 is suitable for the sanitization of the cockpits of even large vehicles and A/C systems.

In working or professional environments it allows the treatment of even large volumes thanks to the high ozone production capacity and the programmable timer.

The OZONE3 Generator allows a complete inactivation of all microorganisms, the elimination by oxidation of toxic or harmful residues, organic and inorganic in the air and on surfaces, eliminating all persistent odours related to them.

- It leaves no residues and drastically reduces the use of chemicals;
- It does not damage the interior materials and does not stain fabrics;
- It only takes a few minutes to sanitize a vehicle;
- Maximum penetration capacity: sanitizes even the most difficult to reach points.

IT SANITIZES

the air and surfaces from pathogens such as bacteria, fungi, mould and pollen, the main causes of allergic reactions and acts as an inactivator on viruses. The sanitization also has an effect in the air conditioning ducts and in the evaporator where foul-smelling moulds are created by humidity.

DEODORIZES AND HYGIENIZES

the cabin in a natural way, totally eliminating unpleasant odours of various kinds (smoke, animals, mould...), bacteria and pollen - the main causes of allergic reactions - without staining the vehicle's fabrics and materials.

In Europe

- Used since 2003 for disinfection and sterilisation in water bottling processes, it is regulated for food purposes by EFSA Commission Directive 2003/40/EC of 16 May 2003.

HOW TO USE

A production of 10 g/h of Ozone allows, with about 20min of use, the sanitization of an environment, at set temperature and humidity conditions, of about 100m³.

DECONTAMINE FROM:

- Virus
- Moulds
- Bacteria

IT ELIMINATES SMELLS LIKE:

- Cigarette smoke smell
- Smell of sweat
- Animal smell
- Odour of cooking
- Odour of volatile chemical compounds

AVAILABLE VERSIONS

- White painted steel structure
- Structure in satin stainless steel 304 with Scotch-Brite finish

TECHNICAL FEATURES

• Ozone Production	10 g/h
• Fan	115 m ³ /h
• Volt	220-240 V
• Frequency	50/60 Hz
• Power	85 W
• Sound Lpa 3 mt	52 dB (A)
• Cable length	3 m
